

EVALUATION CRITERIA FOR STRATEGIC TECHNOLOGY INVESTMENTS

Evaluation Question or Criteria	Prism Answer
Will we incur costs supporting installations and updates of the solution across company computers?	No
Does the solution have mechanisms for automated updates and patches without our involvement?	Yes
Does it rely on older unsupported frameworks like Windows Mobile?	No
Will the solution be kept current as operating systems and computing evolves, e.g. is it on a roadmap?	Yes
Does it require special infrastructure or hardware such as high powered laptops, rugged devices or servers?	No
Are there additional costs beyond a subscription for keeping the software current?	No
Is the solution and its data securely accessible from anywhere?	Yes
Does the solution use standard IT security best practices for access?	Yes
Does it function on all modern hardware, e.g. Android, Windows 10 and Apple OS?	Yes
Is user configuration part of the design so we can change lists, settings and values without vendor help?	Yes
Does it fit within and integrate with our current technology?	Yes
Is it resourced by a full team with staff redundancy to reduce risks to continued long term function?	Yes
Is there support infrastructure in place?	Yes
Does it use non-proprietary open data formats which allow access from other software?	Yes
Are there documented policies on our data privacy and is our data ours if we stop using the solution?	Yes
