

PLANET LABS IMAGERY

GAME CHANGING REAL TIME IMAGERY FOR NATURAL RESOURCES

Can't find a specific aerial image for a tract? Stream images from now or the past to map to update and monitor anywhere work is being done.

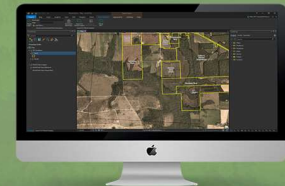

When you're juggling multiple timber sales, contractors and employees, time is at a premium. Real time imagery is actionable for monitoring forest operations, updating status and making sure work doesn't slip between the cracks.

As veteran foresters and Planet experts, we spec out an imagery program which delivers immediate operational benefits.

- USE YOUR PLANET IMAGERY ACROSS ANY ArcGIS APP
- MONITOR FOREST ACTIVITIES IN REAL TIME
- FLEXIBLE SUBSCRIPTION MODEL
- HIGH RESOLUTION AND LOW RESOLUTION OPTIONS
- NO FILE HANDLING OR DATA MANAGEMENT NEEDED
- MORE ECONOMICAL THAN A TRADITIONAL IMAGERY PROGRAM OF DRONES AND FIXED WING

*Real time imagery, on any device
with no bulky files*

*Planet Labs imagery with ArcGIS
simplifies the delivery of a real time
view of forest operations*
